Product Description TOYOPEARL chromatographic resins are based on a rigid methacrylic polymer, resulting in high mechanical and chemical stability. Resins are available as non-functionalized “HW” series resins for size exclusion separations, and derivatized with surface chemistries for alternative modes of chromatography such as ion exchange, hydrophobic interaction or affinity separations.

TOYOPEARL AF-Formyl-650M is a reactive support resin for affinity chromatography. The product is prepared by introducing formyl groups onto TOYOPEARL HW-65. Formyl-activated material is used to immobilize ligands with free amino groups.
